

Human cloning is moving to Japan - according to Dr Richard Seed. His group has raised \$15 million human cloning cash and bought land in Hokkaido, an island in Northern Japan. The human cloning group's Tokyo consultant, James Ryan, says the facilities will open in August 1999 for infertile couples. They expect around 500 baby human clones a year. Dr Seed said of human cloning earlier this year: "God made man in his own image. God intended for man to become one with God. Cloning and the reprogramming of DNA are the first serious steps in becoming one with God."
